SUMMARY

Final-year B.Tech Computer Engineering student who builds complete products end-to-end – frontend, backend, data layer, and deployment – across React, Next.js, Node.js, and Java/Android. Work spans an emergency-response dashboard, an AI-integrated analytics platform, and a native Android app, backed by two Generative AI certifications (Google Cloud, via Coursera) and self-directed Data Structures & Algorithms study (Java).

EXPERIENCE

Frontend Development Intern — CodSoft
Remote

- Delivered 3 client-facing web applications using HTML5, CSS3, and ES6+ JavaScript within sprint-style deadlines, achieving 100% first-submission acceptance.
- Diagnosed cross-device rendering failures with Chrome DevTools, cutting visual regressions by ~30%; organized JavaScript modules around component-level separation of concerns, cutting review cycles by ~25%.

Jun 2025 – Jul 2025

PROJECTS

DisasterLink — Real-Time Emergency Management Platform
Next.js 15, TypeScript, Tailwind CSS, Zustand, REST APIs

- Architected role-based dashboards (Super Admin, Admin, Citizen, Volunteer) with a real-time incident-command view, engineering 20+ reusable React components across 5 route groups.
- Configured Zustand for global state and a service-layer abstraction over REST APIs, reducing coupling issues by ~40%, while resolving Windows-specific build and hydration errors to keep the pipeline stable.

Feb 2025 – Present
[GitHub](#)

CarbonLens — AI-Powered Carbon Tracking Platform
React.js, Node.js, MongoDB, Chart.js, AI/LLM APIs

- Developed a full-stack platform tracking emissions across transport, food, electricity, and screen time, integrating third-party AI/LLM APIs for real-time personalized analysis.
- Modeled the MongoDB schema and backend API layer, designed Chart.js dashboards for sustainability trends, and presented the platform at the Parul University Environment Hackathon 2026.

May 2026 – Present
[GitHub](#)

Terralife — Native Android Plant Identification App
Java, Android SDK, Firebase, ML Kit, CameraX

- Constructed the complete Java project structure from scratch, including Firebase Auth/Firestore/Storage, ML Kit image labeling, CameraX capture, and Jetpack Navigation.
- Fixed Gradle version conflicts, XML layout corruption, and MaterialCardView cast crashes, reducing crash rate by ~40% and reaching ~90% on-device recognition accuracy.

2025

TECHNICAL SKILLS

Languages:	Java, JavaScript (ES6+), TypeScript
Frontend:	React.js, Next.js 15, Tailwind CSS, HTML5, CSS3, Chart.js
Backend/Data:	Node.js, REST API design, MongoDB, Firebase (Auth, Firestore, Storage)
Mobile:	Android SDK, ML Kit, CameraX, Jetpack Navigation
AI:	AI/LLM API integration (incl. OpenAI), AI-assisted development (Claude, Copilot)
CS Fundamentals:	OOP, Data Structures & Algorithms (Java, self-study), DBMS basics
Tooling:	Git/GitHub, Chrome DevTools, Postman, Vercel
Building Block:	Flutter, Kotlin, Python, PostgreSQL, Selenium, Jest

EDUCATION

B.Tech (Computer Science Engineering)
Parul Institute of Engineering & Technology, Vadodara

Jul 2024 – May 2027

Diploma in Mechanical Engineering
Puranmal Lahoti Government Polytechnic

Jun 2020 – May 2024

ACHIEVEMENTS & CERTIFICATIONS

Generative AI Engineering — Coursera (Google Cloud) | **Generative AI Leader — Coursera**

Capstone: Independently designed, built, and deployed DisasterLink, CarbonLens, and Terralife end-to-end across web, AI analytics, and native Android, with a consistent record of resolving real production issues.
